# Testability Quality Attribute

Software testability refers to the ease with which software can be made to demonstrate its faults through testing.

# Testable System

- ❑ control each component's inputs
- ❑ observe its outputs (and possibly its internal state).

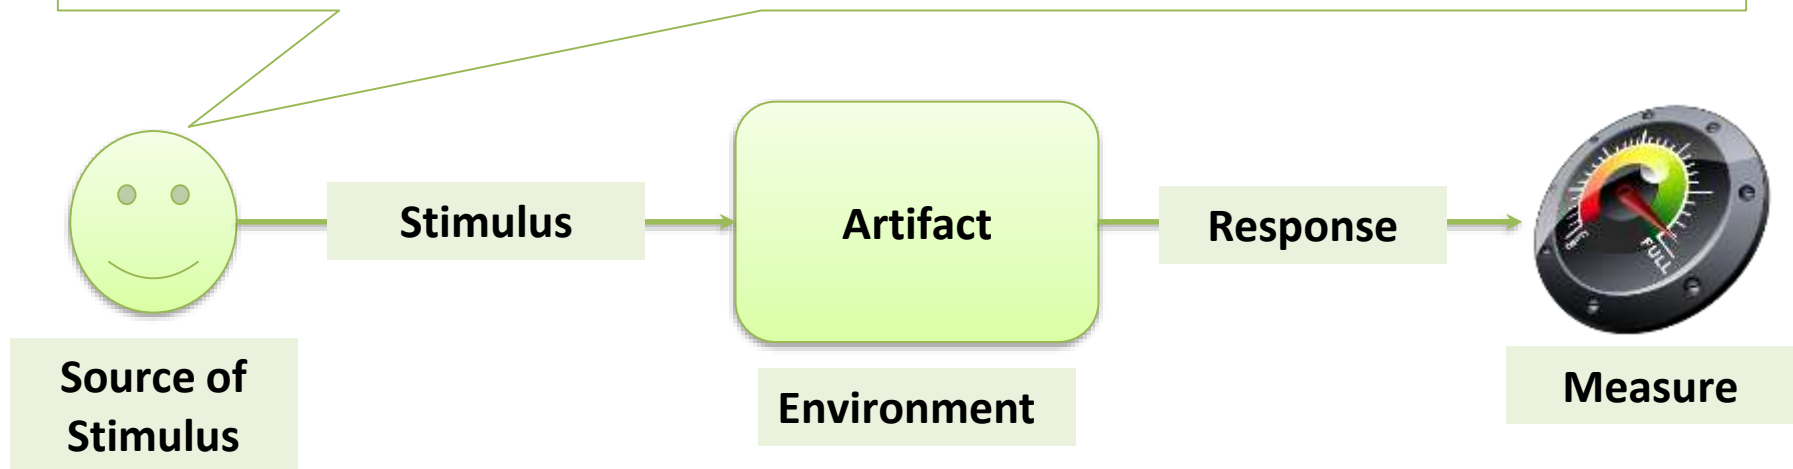

# Modifiability Requirement Scenario

- portion of the system being tested

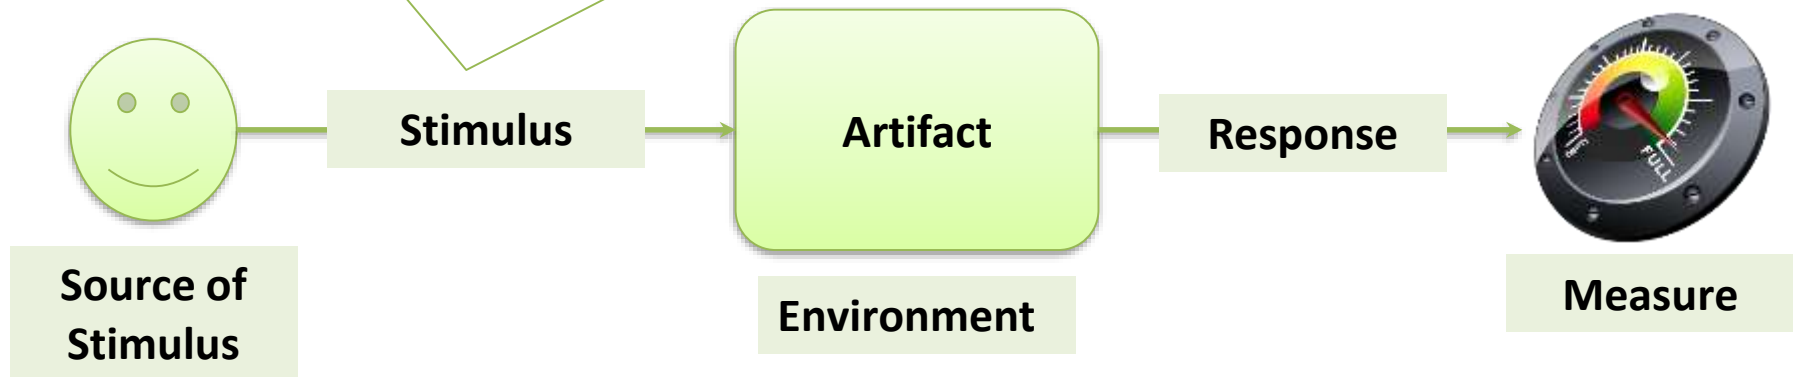

# Modifiability Requirement Scenario

- who tests
  - testers, including users

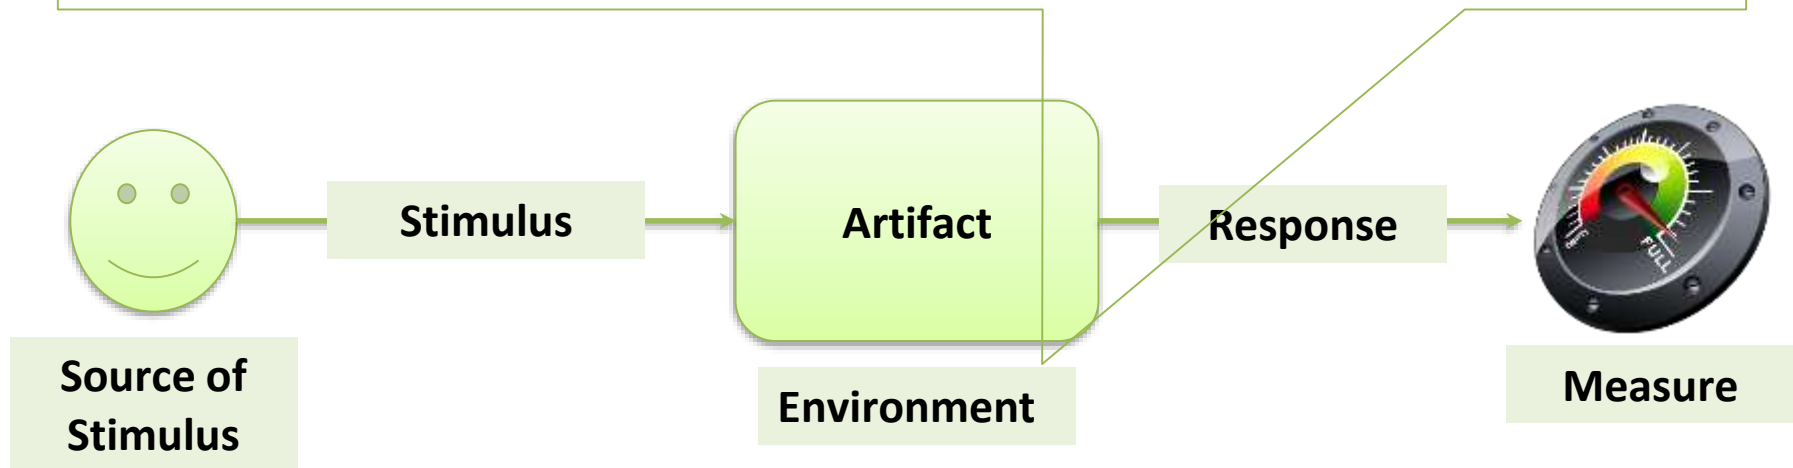

# Modifiability Requirement Scenario

- set of tests executed by the source on the artifact

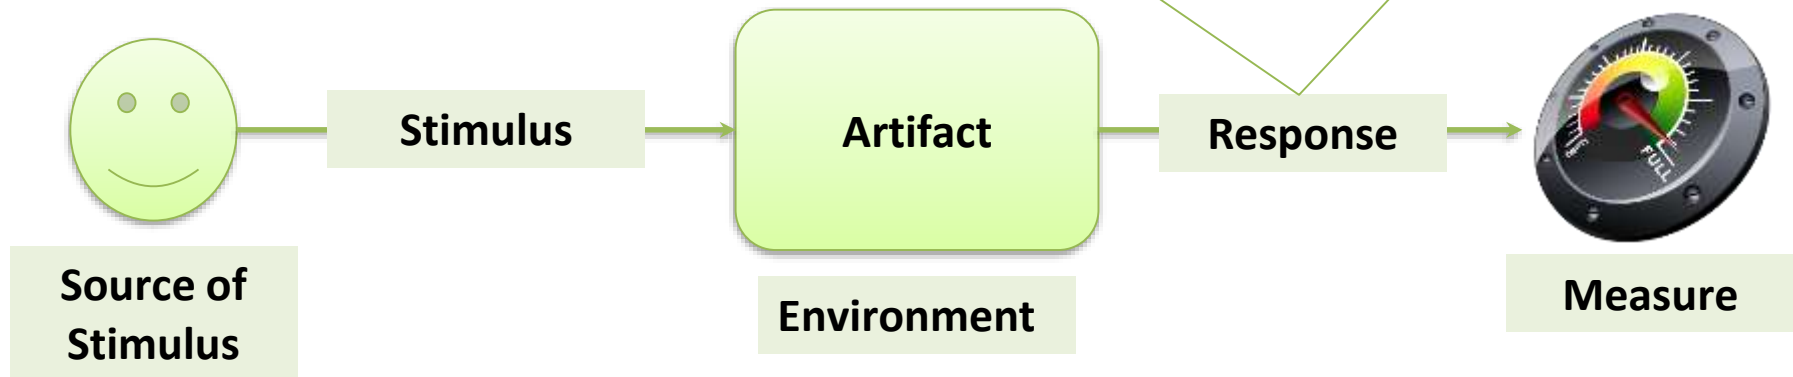

# Modifiability Requirement Scenario

- ❑ time when the test happens
- ❑ test environment

# Modifiability Requirement Scenario

- system can be controlled to perform the desired tests and observe the results

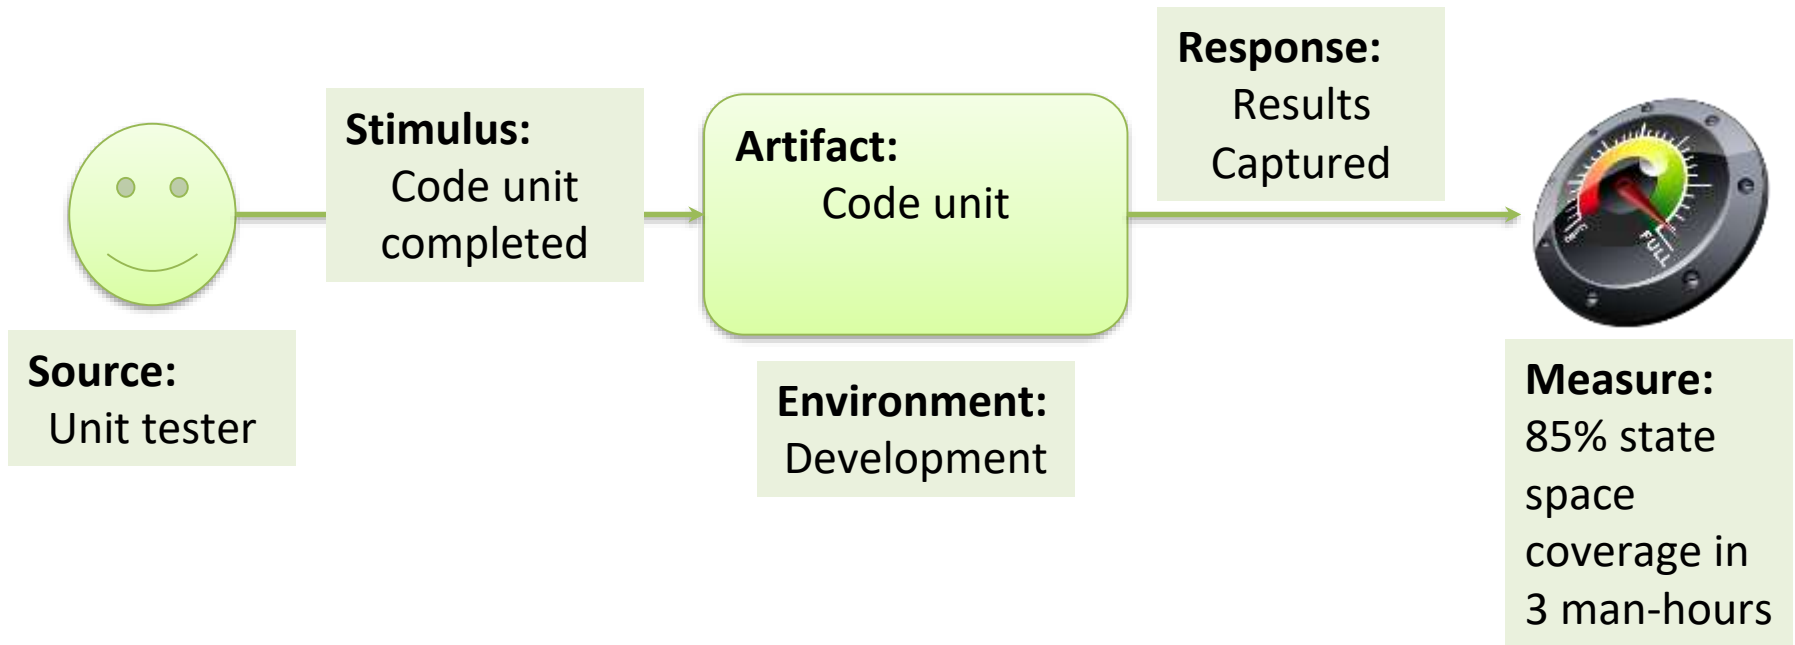

# Modifiability Requirement Scenario

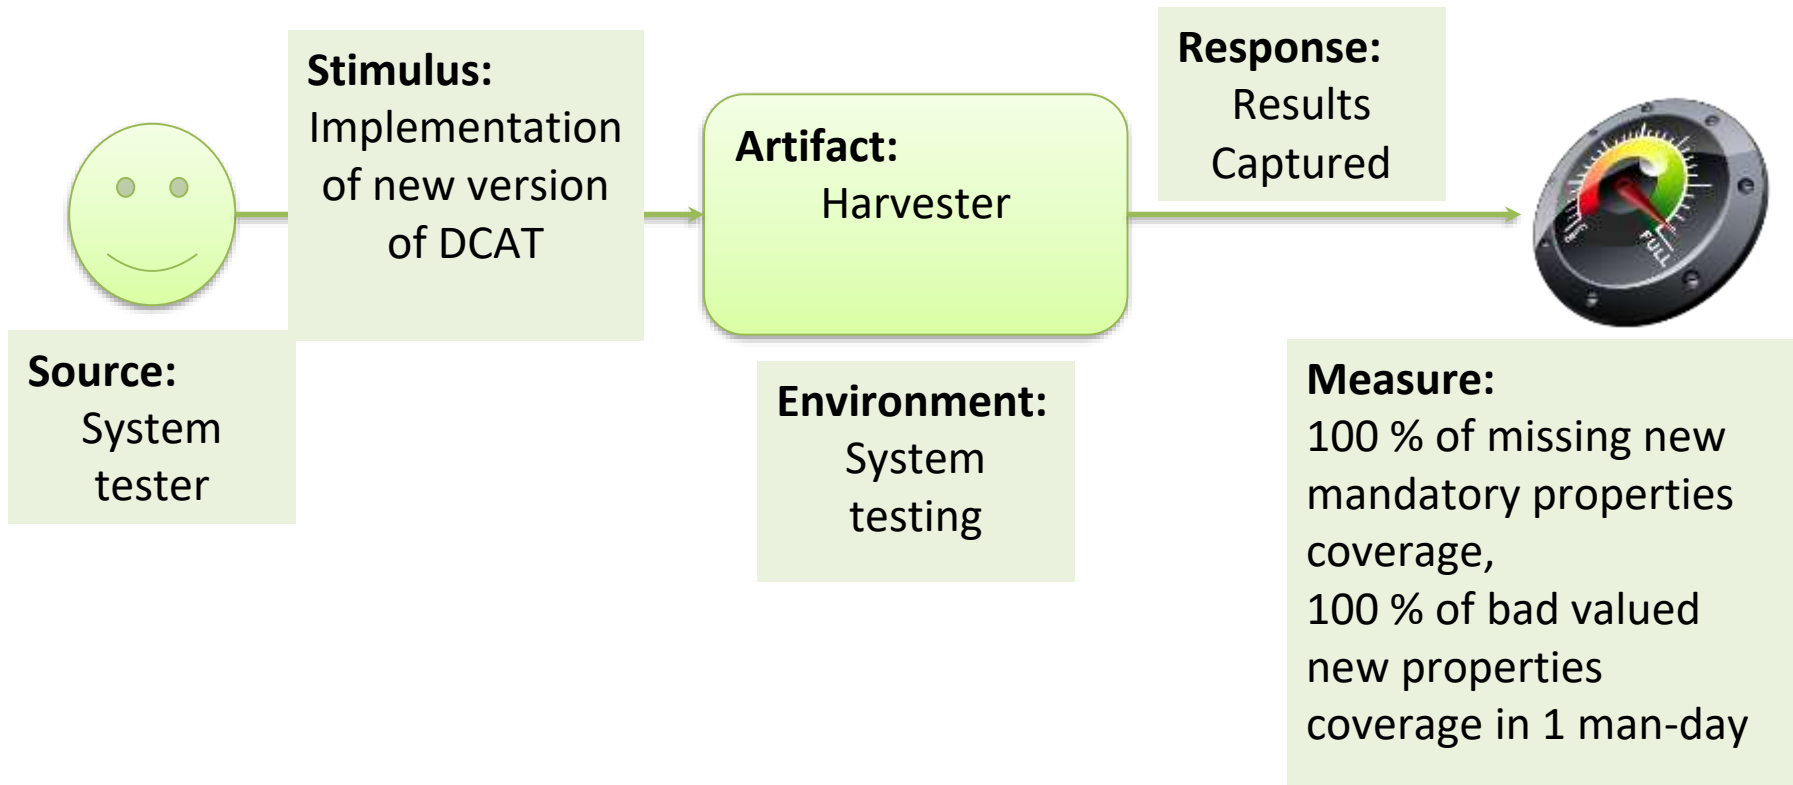

- represents how easily system under the tests shall give up its faults

# Testability Quality Attribute

# Testability Quality Attribute

# Goal of Testability Tactics

- ❑ easier testing when an increment of software development has completed
- ❑ 2 categories of tactics
  - adding controllability and observability to the system
  - limiting complexity in the system's design

# Control and Observe System State

# Control and Observe System State

- specialized interfaces

# Control and Observe System State

- ❑ specialized interfaces
- ❑ record/playback

# Control and Observe System State

- ❑ specialized interfaces
- ❑ record/playback
- ❑ localize state storage

# Control and Observe System State

- ❑ specialized interfaces
- ❑ record/playback
- ❑ localize state storage
- ❑ abstract data sources

# Control and Observe System State

- ❑ specialized interfaces
- ❑ record/playback
- ❑ localize state storage
- ❑ abstract data sources
- ❑ sandbox

# Limit Complexity

# Limit Complexity

- limit structural complexity

# Limit Complexity

- ❑ limit structural complexity
- ❑ limit nondeterminism
